

ROHIT SINGH

Analytics Engineer | Senior Power BI Developer | Microsoft Fabric | AI-Augmented Analytics

Bengaluru, India • +91-9211344608 • rowhit.singh99@gmail.com • [rohitsingh-dea.github.io/Rohit-Singh-portfolio](https://github.com/rohitsingh-dea)

PROFESSIONAL SUMMARY

Analytics Engineer and Senior Power BI specialist with **6+ years** building enterprise data platforms on **Microsoft Fabric** and the Azure data stack. Architect of **Lakehouse/Warehouse (OneLake, Delta, Medallion)** platforms and **Direct Lake semantic models** — including a **316+ measure DAX library**, RLS, and certified governed datasets that became single sources of truth for sales leadership. Deep ELT engineering across **Fabric Data Factory, Dataflows Gen2, ADF, PySpark, and Fivetran** over Salesforce, HubSpot, Zuora, and SQL Server. Early adopter of **agentic AI in analytics**: piloted Claude AI + **MCP Server** integration with Fabric to automate SQL drafting, pipeline generation, and anomaly reporting. Track record of measurable outcomes: 60% faster dashboard delivery, 70–80% reporting automation, and funnel analytics that directly steer marketing spend.

CORE SKILLS & TECHNOLOGIES

Microsoft Fabric: Lakehouse, Data Warehouse, OneLake, Notebooks, Pipelines, Dataflows Gen2, Semantic Link, Direct Lake, Git Integration, Deployment Pipelines (CI/CD)

Power BI & Semantic Layer: Direct Lake Semantic Models, Star Schema & Dimensional Modelling, Advanced DAX, Row-Level Security (RLS), Certified Datasets, Tabular Editor, KPI Hub Design, Dashboard & Report Development, Performance Tuning

Data Engineering: ELT/ETL Design, Medallion Architecture (Bronze–Silver–Gold), Delta Lake & Parquet, ADF, Fivetran, PySpark, Incremental Loads, SCD Type 2, SQL Server

AI & Automation: MCP Server, Claude AI / Claude Code, Azure AI Foundry, M365 Copilot, FabricIQ, Agentic Workflows, AI-Assisted SQL Transformation, Anomaly Detection

Data Quality & Governance: Automated Validation (nulls, referential integrity, row-count reconciliation), Data Lineage, Data Contracts, Metadata Management, GxP / SOX / PII Compliance

Cloud & Optimisation: Azure Networking, Managed Identities, Service Principals, Entra ID, Capacity & Cost Optimisation, Partition Pruning, Materialized Aggregations

Languages & Tools: Advanced SQL, Python (PySpark, Pandas, NumPy), Git, VS Code, JIRA, Confluence, LucidChart

CRM & Marketing Analytics: Salesforce, HubSpot, Zuora, GA4, Adobe Analytics, Multi-Touch Attribution, CAC, ROAS, MQL→SAO Funnel Analytics

PROFESSIONAL EXPERIENCE

Analytics Engineer | Metadata Development & Services (India) LLP — M-Files 2025 – Present

- **Fabric Lakehouse/Warehouse platform:** Architected a Fabric-native platform on OneLake (Delta Parquet, Bronze→Silver→Gold Medallion), consolidating fragmented multi-source reporting into a single certified Power BI dataset — cut stakeholder dashboard build time by ~60% and eliminated cross-report metric discrepancies.
- **Direct Lake semantic models:** Designed star-schema models and authored a **316+ measure advanced DAX library**; configured RLS and certified datasets as governed, reusable data products powering a centralised KPI Hub for sales forecasting.
- **ELT pipeline engineering:** Built and operated end-to-end pipelines (Fabric Data Factory, Dataflows Gen2, ADF) ingesting Salesforce, HubSpot, Zuora, and SQL Server into Fabric Warehouse, with partition-optimised Delta tables and Git-integrated CI/CD promoting Dev → Test → Prod.
- **PySpark & data quality:** Engineered Fabric Notebooks for large-scale transforms — deduplication, SCD Type 2, incremental loads — bound to semantic models via Semantic Link; automated validation (null detection, referential integrity, row-count reconciliation) with lineage and schema documentation in Confluence.
- **MCP Server / AI integration:** Piloted Claude AI–Fabric integration via MCP Server enabling AI-assisted SQL transformation drafting, pipeline generation, and automated anomaly reporting; optimised capacity, storage, and query cost (partition pruning, materialized aggregations).
- **GTM Ops & funnel analytics:** Delivered MQL → SQL → SAO → Close funnel, velocity, and cohort analytics plus CAC, ROAS, and multi-touch attribution dashboards that directly informed campaign budget allocation.

Manager – Data Analytics | Nicobar Design Pvt. Ltd 2024 – 2025

- Architected a scalable ELT pipeline (Python, SQL, REST APIs) for real-time transaction analytics across e-commerce and retail channels; automated Power BI dashboards adopted by 20+ stakeholders, eliminating 80% of manual reporting effort.
- Led cohort analysis and A/B testing across the purchase funnel — surfaced checkout friction points whose fixes lifted conversion rate by 22%, and built repeat-purchase and inventory views used in weekly trading decisions.
- Built returns and basket-composition analytics (return-reason taxonomy, size-fit patterns, single-quantity bill share): insights drove targeted PDP/size-guide fixes and bundling/cross-sell recommendations — reducing return rate by ~12%

and cutting single-quantity bill share by raising units-per-transaction ~15%.

Analytics Consultant | Upwork (Remote, Global Clients)

2023 – 2024

- Consulted across SaaS, retail, and media verticals — built multi-touch attribution, churn, and ARPU dashboards (Power BI, Tableau, Adobe Analytics) that reduced client reporting cycles by 40%.
- Built and governed ETL pipelines and data-quality standards for 5+ global clients, establishing clean, trusted data foundations for cross-functional analytics teams.
- Designed churn early-warning segmentation for a SaaS client (usage-decay and engagement scoring) feeding win-back campaigns — cut monthly logo churn by ~10% and identified upsell cohorts that lifted expansion revenue in targeted accounts.

Power BI Developer | Oxania Healthcare Pvt. Ltd

2019 – 2023

- Engineered 10+ BI dashboards across healthcare claims processing and hospital ED operations; automated ETL with SQL and Python (Pandas), cutting claims turnaround by 20% and patient wait times by 20%.
- Transformed 100K+ raw operational records into analytical models, giving clinical and business stakeholders their first self-serve performance visibility; drove 18% outreach growth through data-backed targeting.
- Built claims-denial analytics (denial-reason and payer-mix dashboards) that pinpointed top rejection drivers — process fixes from these insights reduced claim denial/resubmission rates by ~15% and recovered revenue leakage for the billing team.

EDUCATION & CERTIFICATIONS

Post Graduate Programme — Artificial Intelligence & Machine Learning | Great Lakes Institute of Management | **Pursuing**

DP-600 — Microsoft Fabric Analytics Engineer Associate | Course Completed | **Exam Scheduled**

AI Fluency & Claude Certification | Anthropic | **Certified**

B.Tech — Computer Science Engineering | Noida International University | 2018
